

The Roly Poly Research Project is ongoing this semester! This project is an interdisciplinary collaboration among STEM faculty, staff and students where we investigate the metapopulation dynamics of our campus woodlouse population. There are opportunities to get involved at any level of participation that works for you so stop by and check it out.

How many of us are there?

Have you seen me?

Where do we live on campus?

How much do we move around?

Why do we cross the sidewalks?

Need "research experience" on your resume? ∞ Interested in ecology or environmental science? ∞ Want to meet other students and spend time out of class with instructors? ∞ Like science but not sure what "being a scientist" means? ∞ Enjoy being outdoors and getting your hands dirty? ∞ Like working with others to accomplish a big project? ∞ Interested in math, computer science or GIS technology? ∞ Want to practice useful skills like using a microscope?

THEN JOIN THE RPRP!!!

You don't need any particular knowledge or skills to join!

We figure stuff out as we go and do **real** experiments!

If you want to take on more responsibility you can do your own project and eventually may get to present it at a research conference!

Just drop in when it fits your schedule!

The Roly Poly Research Project generally meets on Fridays all semester. You do not need to attend meetings to get involved, however. Email Dr. Ripley at bonnie.ripley@gccd.edu to find out more. Use the QR code above find out more on the RPRP website. You can also follow our adventures on Instagram using #rolypolyresearchproject and on YouTube at the  Roly Poly Research Project channel.
