

Exam #4: Chapters 8 - 9

NAME _____

Math 160, Section 7963

Spring 2010: Michael Orr

100 points. Show all work to receive full credit. You may use a calculator. CHECK YOUR WORK!!!!

Write down all formulas or calculator commands used to receive credit!!!!!!!

1. (15 pts) When people smoke, the nicotine that they absorb is converted to cotine, which can be measured. A sample of 40 smokers has a mean cotine level of 172.5. Assuming that σ is known to be 149.5, use a 0.05 significance level to test the claim that the mean cotine level of all smokers is equal to 240. (Use traditional or P-value method).

Critical value(s): _____

Null Hypothesis conclusion:

Conclusion on claim:

2. (15 pts) The Stewart Aviation Products Company uses a new production method to manufacture aircraft altimeters. A sample random sample of 81 altimeters is tested in a pressure chamber, and the errors in altitude are recorded as positive values (for readings that are too high) or negative values (for readings that are too low). The sample has a standard deviation of 52.3 ft. At a 0.05 significance level, test the claim that the new production line has errors with a standard deviation different from 43.7 ft. which was the standard deviation for the old production method. If it appears that the standard deviation has changed, does the new production method appear to be better or worse than the old method?

Test statistic: _____

Critical value(s): _____

Null Hypothesis conclusion:

Conclusion on claim:

3. (20 pts) Olympic Winners. Listed below are the winning times (in seconds) of men in the 100-meter dash for consecutive summer Olympic games, listed in order by row. Assuming that these results are sample data randomly selected from the population of all past and future Olympic games, test the claim that the mean time is less than 10.5 sec.

12.0 11.0 11.0 11.2 10.8 10.8 10.8 10.6 10.3 10.4
 10.5 10.2 10.0 10.14 10.06 10.25.

H_1 : _____

Test statistic: _____

Critical value(s): _____

Null Hypothesis conclusion:

Conclusion on claim:

4. (15 pts) A study was conducted to determine whether magnets are effective at treating back pain. One group was given the magnet treatment, while the other group was given a placebo treatment. The results are shown below where measurements are in centimeters on a pain scale. Do not assume the population standard deviations are equal. Using a significance level of 0.01, test the claim that the magnets have a measurable effect on back pain.

<u>Magnet</u>	<u>Placebo</u>
$n_1 = 23$	$n_2 = 25$
$\bar{x}_1 = 0.47$	$\bar{x}_2 = 0.32$
$s_1 = 0.95$	$s_2 = 1.45$

H_o : _____

H_1 : _____

Test statistic: _____

Critical value(s): _____

Null Hypothesis conclusion:

Conclusion on claim:

5. (20 pts) A researcher claims that listening to Mozart improves scores on math quizzes. A random sample of five students took math quizzes, first before then after listening to Mozart. Test the claim that listening to Mozart improves scores on math quizzes. Use a 0.01 level of significance.

Before	75	50	80	85	95
After	85	45	85	95	95

H_o : _____

H_1 : _____

Test statistic: _____

Critical value(s): _____

Null Hypothesis conclusion:

Conclusion on claim:

6. (15 pts) In a random sample of 360 women, 65% favored stricter gun control laws. In a random sample of 220 men, 60% favored stricter gun control laws. Test the claim that the proportion of women who favor gun control is higher than the proportion of men favoring stricter gun control. Use a significance level of 0.05.

Test statistic: _____

Critical value(s): _____

Null Hypothesis conclusion:

Conclusion on claim:

EXTRA CREDIT ON BACK

BONUS (10 points)

A section of Highway 405 in Los Angeles has a speed limit of 65 mph and recorded speeds are listed below for randomly selected cars traveling on northbound and southbound lanes.

I-405 North: 68 68 72 73 65 74 73 72 68 65 65 73 66 71 68 74 66 71 65 73

I-405 South: 59 75 70 56 66 75 68 75 62 72 60 73 61 75 58 74 60 73 58 75

- A. Using the speeds for the northbound lanes, find the mean, median, standard deviation, variance, and range.
- B. Using all the speeds combined, test the claim that the mean is greater than the posted speed limit of 65 mph.
- C. Do the northbound speeds appear to come from a normally distributed population? Explain.
- D. Assuming that the speeds are from normally distributed populations, test the claim that the mean speed on the northbound lanes is equal to the mean speed on the southbound lanes.
